Think Happy Live Healthy

Search Campaign Rebuild & Copy Review - April 2026

Prepared by	Date	Status	Campaign
ARC Agency	April 28, 2026	Awaiting Human Review & Approval	ARC - Search - Services - V1

STARTING POINT

What We Inherited vs. What We Built

BEFORE: ORIGINAL ACCOUNT STRUCTURE

- ✕ "Ashburn ad" campaign with one generic "Ad group 1" NO STRUCTURE
- ✕ "shannonsabanosh" campaign - provider name, no strategy BRAND LEAK
- ✕ "Leads-Search-4" campaign - unnamed, no intent UNNAMED
- ✕ Service therapy ad groups duplicated in BOTH Ashburn AND Falls Church campaigns SELF-COMPETING
- ✕ Zero coverage for testing services (ADHD, gifted, K-ready, autism, psych evals) MISSING
- ✕ Ad groups named "Anxiety", "Depression" - no audience or intent layer
- ✕ "near me" terms mixed with city and general terms in the same ad group
- ✕ No data-driven geo targeting or bid modifiers based on actual CPA
- ✕ Broad match likely present in older campaigns - uncontrolled spend

AFTER: REBUILT ACCOUNT STRUCTURE

- ✓ One unified campaign with structured, descriptive ad group names ORGANIZED
- ✓ 9 ad groups staged and validated, 96 planned across full service taxonomy
- ✓ Full testing service coverage: ADHD, Gifted, K-Ready, Autism, Psych Evals
- ✓ Intent-separated naming: Service - Audience - Intent (General / Local / City / State)
- ✓ Phrase-only match type throughout - no broad match CONTROLLED
- ✓ Geo targeting based on real CPA data from account performance reports
- ✓ Tier 1 bid modifiers on Loudoun County ($137 CPA) and Fairfax County ($271 CPA)
- ✓ Expansion roadmap: 5 campaigns planned as data justifies splits
- ✓ All copy passes character limit validation before import

DIAGNOSIS

Why the Original Structure Was a Problem

This group can start a new page and still read as an intentional designed section.

01

Self-Competing Geo Campaigns

Running "Anxiety" in both the Ashburn and Falls Church campaigns meant bidding against yourself for the same searcher. Split budgets, split data, no way to see which copy or keyword actually drove results. Unified into one campaign with geo targeting handles this cleanly.

02

Zero Testing Coverage

The account had no ad groups targeting psychological testing, ADHD evaluations, gifted testing, kindergarten readiness, or autism assessments - services the practice offers. These represent an entirely uncaptured patient segment. The rebuild adds dedicated ad groups for all of them.

03

Intent Mixing

"Therapist near me", "therapist ashburn va", and "therapy" all in the same ad group means you can't match ad copy to search intent. A "near me" searcher is ready to book; a generic "therapy" searcher may just be researching. Separate intent layers let you write to each mindset.

04

Unstrategic Names & Structures

"Leads-Search-4", "Ashburn ad", "Ad group 1" - these names tell you nothing about what they target. When something breaks, you can't diagnose it. When performance is good, you can't replicate it. The new naming convention makes every ad group self-documenting.

OUR APPROACH

How We Rebuilt This Account

Every decision in this rebuild came from data, not guesswork. We pulled the account's search term report and location performance report, classified every converting term, and used real CPA numbers to make structural and targeting decisions.

Phrase Match Only - No Broad Match

Every keyword in the rebuilt campaign uses phrase match exclusively. Broad match has no controls - Google will show your ad for any related search it decides is relevant, including competitors, out-of-area searches, and low-intent queries. Phrase match means "psychiatrist near me" only triggers when that phrase appears in the search, in that order.

> **The original account was spending on searches like "adhd coach near me" - a service THHL doesn't offer - likely because of broad match. That's wasted budget against the wrong patient intent.**

Service-First Ad Group Naming

Every ad group follows the pattern: **Service - Audience/Category - Intent Layer**. For example: "Testing - ADHD - Local" or "Therapy - Anxiety - City". This means the ad group name tells you exactly what service it serves, who the audience is, and what kind of keyword intent it captures.

> **When you have 96 ad groups across 5 campaigns, you need to read a name and instantly know what it is. Vague names like "Anxiety" or "Ad group 1" collapse under that scale.**

Intent Layers: General / Local / City / State

Every service gets four ad groups, one per intent layer. **General** = no geo modifier ("child psychiatry"). **Local** = proximity search ("child psychiatry near me"). **City** = explicit city ("child psychiatry ashburn"). **State** = state-level modifier ("child psychiatry virginia"). Each layer gets copy written for that specific intent.

> **"Near me" searchers are often ready to book now. "Virginia" searchers may be comparing providers across the state. They need different messages. One ad group for all of them wastes that difference.**

Data-Driven Geo Targeting

Targeting is based on real CPA from the account's location performance report. Loudoun County converted at **$137 CPA** and Fairfax County at **$271 CPA** - both get +20% bid modifiers. Virginia statewide and Washington DC get +10%. Manassas showed zero conversions and gets a -25% reduction.

> **Treating every location the same wastes money on low-converting areas and underinvests in high-converting ones. We let the data decide, not assumptions.**

How We Rebuilt This Account

CONTINUED

RSA Asset Role Architecture

Each headline has an assigned role: keyword match, geo signal, credential, benefit, question, CTA, or proof. Each RSA gets 15 headlines covering all roles, so Google's machine learning can

Build Now, Split Later

Campaign 1 starts with 9 ad groups in one campaign. As performance data accumulates, the highest-converting services and geographies get promoted into their own campaigns with dedicated

assemble high-relevance combinations for any searcher. Descriptions cover service fit, care process, location access, and CTA - one each, all four slots filled.

> **RSAs perform better when the asset pool gives Google meaningful variety to test. If all 15 headlines say the same thing differently, the system has no real options.**

budgets. The full taxonomy has 96 planned ad groups across 5 campaigns - all using the same naming and structure conventions.

> **Splitting too early fragments your data and makes optimization harder. Starting unified gives you a baseline, then you split where the data proves it's worth the budget isolation.**

PERFORMANCE DATA

What the Data Told Us

Two reports drove this rebuild: a search terms report (39 usable converting terms) and a location performance report. Here are the key findings that shaped the structure.

SEARCH TERM EVIDENCE

Top Converting Service Themes

Performance themes are summarized before the details so the page opener has context.

$8.63

CPA - CHILD ADHD TESTING

4 converting terms, 6 clicks - highest efficiency in the account

$13.40

CPA - ANXIETY TREATMENT

4 terms, 13 clicks, 7 conversions - strong, consistent performer

$13.61

CPA - CHILD BEHAVIORAL THERAPY

2 terms, 6 clicks - maps to Therapy - Children ad group

$15.55

CPA - CHILD PSYCHIATRY/PSYCHOLOGY

3 terms, 11 clicks, 5 conversions - strong child psychiatry signal

$22.29

CPA - PSYCHIATRIC NP

3 terms, 12 clicks - psych NP terms are proven converters

$224

CPA - ADHD COACH (EXCLUDED)

"adhd coach near me" - high CPA, wrong service type. Excluded from build.

LOCATION EVIDENCE

Geo Targeting Decisions

Location performance is grouped separately because this table may naturally flow to a new page.

LOCATION	CONVERSIONS	CPA	BID MODIFIER	RATIONALE
Loudoun County, VA	13	**$137**	**+20%**	Tier 1 - best CPA in account. Ashburn & Leesburg are here.
Fairfax County, VA	16	**$271**	**+20%**	Tier 1 - highest conversion volume. Falls Church is here.
Virginia (statewide)	39	**$333**	**+10%**	Tier 2 - strong volume base, supports all in-state patients
Washington, DC	5	**$376**	**+10%**	Tier 2 - lower volume, monitor closely, telehealth expansion
Prince William County, VA	4	**$301**	**+10%**	Tier 2 - Manassas area, worth including
Maryland (statewide)	15	$718	Monitor	High CPA - include but review after 30 days. Do not expand yet.
Manassas, VA	0	$0	-25%	Zero conversions, active spend. Reduce bids until data improves.

CAMPAIGN ARCHITECTURE

How the Account is Organized

NAMING SYSTEM

Ad Group Naming Convention

Each name should explain service, audience, and intent without relying on internal notes.

Every ad group in the account follows this pattern. Read the name and you immediately know what it targets, who for, and what search intent it captures.

Service - **Audience / Category** - **Intent Layer**

Examples: **Testing - ADHD - Local** | **Therapy - Anxiety - City** | **Psychiatry - Children - General**

INTENT MODEL

Intent Layers Explained

The same service can perform differently by general, local, city, or state intent.

LAYER	WHAT IT CAPTURES	EXAMPLE KEYWORDS	AD COPY FOCUS
General	No geo modifier in the search query	`"child psychiatry", "adhd therapy"`	Service name + benefit + credential. Not geo-specific.
Local	"near me" and close-proximity language	`"psychiatrist near me", "therapy near me"`	Geo-specific + proximity signal + CTA. Searcher is ready to book.
City	Explicit city in the search query	`"therapist ashburn va", "psychiatrist falls church"`	City name in headline + service. Show you're specifically in that city.
State	State modifier in the search query	`"psychiatrist northern virginia", "therapy virginia"`	State/region signal + in-person + telehealth. Wider reach.

CURRENT BUILD

Campaign 1 - 9 Ad Groups Staged

This is the first staged build before the account is split further by service or geography.

Psychiatry
12 keywords · 1 RSA · Psych NPs, med mgmt

Adult Therapy
14 keywords · 1 RSA · EMDR, trauma, grief, anxiety

Child Psychological Testing
8 keywords · 1 RSA · Psych assessments for children

Psychoeducational Evaluations
8 keywords · 1 RSA · Learning disabilities, IEP

Gifted Testing
6 keywords · 1 RSA · G&T program eligibility

ADHD Testing
8 keywords · 1 RSA · Child & adult ADHD eval

Kindergarten Readiness Testing
6 keywords · 1 RSA · Pre-K school readiness

Autism Testing
6 keywords · 1 RSA · ASD evaluation child & adult

Parent Child Services
6 keywords · 1 RSA · Family therapy, child counseling

GROWTH ROADMAP

How the Account Expands Over Time

Campaign 1 is launching now. Campaigns 2-5 launch when the data justifies giving that service or geography its own budget and reporting. The full taxonomy covers 24 service categories and 96 planned ad groups.

CAMPAIGN 1 · NOW	CAMPAIGN 2 · NEXT	CAMPAIGN 3 · NEXT	CAMPAIGN 4 · LATER	CAMPAIGN 5 · LATER
ARC - Search - Services - V1	**ARC - Search - Child Testing - V1**	**ARC - Search - Adult Care - V1**	**ARC - Search - Brand - V1**	**Geo Splits - Loudoun / Fairfax / DC**
9 ad groups covering psychiatry, therapy, and all testing services. Unified campaign gives clean baseline data before splitting.	Splits child psych testing, ADHD testing, gifted testing, K-readiness, and autism testing into a dedicated campaign with its own budget.	Separates adult therapy (anxiety, depression, EMDR, trauma, grief) from the child services once volume justifies the split.	Captures "think happy live healthy", phone number searches, and provider name searches if approved by client. Keeps brand CPA separate from nonbrand.	After city and ZIP-level location data proves specific areas deserve dedicated budgets and messaging (e.g., Ashburn vs. Falls Church vs. Arlington).
STAGING NOW	AFTER 60 DAYS DATA	AFTER 60 DAYS DATA	WHEN READY	AFTER GEO DATA

EXPANSION MAP

Full Service Taxonomy

The staged campaign is only the first build. The larger taxonomy shows how coverage expands without losing structure.

CATEGORY	SERVICES COVERED	AD GROUPS (×4 LAYERS)	CAMPAIGN TARGET
Psychiatry	Children's psychiatry, adult psychiatry	`Psychiatry – Children / Adult · General/Local/City/State`	Campaign 1 → 3
Core Therapies	Anxiety, ADHD, Depression, Autism, Stress, Grief, Trauma, Postpartum, LGBTQIA+, Children	`Therapy – [Service] · General/Local/City/State`	Campaign 1 → 3
Specialty Modalities	EMDR, CBT, DBT, Somatic, Mindfulness	`Therapy – [Modality] · General/Local/City/State`	Campaign 3
Testing Services	Child Psychological, Psychoeducational, Gifted, ADHD, Kindergarten Readiness, Autism	`Testing – [Type] · General/Local/City/State`	Campaign 1 → 2
Parent-Child Services	Parent-child therapy, family counseling, behavior therapy for kids	`Parent Child Services – Children · General/Local/City/State`	Campaign 1 → 3

AD COPY REVIEW

9 Ad Groups - Headlines & Descriptions for Review
