
Campaign Rebuild Review

Think Happy Live Healthy

https://www.thinkhappylivehealthy.com/ | Prepared 2026-04-28

Human Review Draft

This document summarizes the rebuild logic, sample ads, and approval points before Google Ads Editor posting.

Executive Summary

24	96	1539	96
Service categories	**Ad groups**	**Phrase keywords**	**Responsive ads**
Structured into reviewable service families	Organized by service and intent layer	No broad match in the rebuild	One RSA per ad group for review

- The rebuild turns the account into a clean Search campaign structure that can be staged in Google Ads Editor.
- Ad groups are organized by service, audience or category, and search intent layer.
- Keywords are phrase match only, with city, local, state, and general variants separated for cleaner reporting.
- Ad copy uses complete RSA assets with stronger headlines, service relevance, and client review points.

Before And After

Starting Point	Rebuild Approach	Why It Matters
13 campaigns, 18 ad groups, 18149 keyword rows	One staged Search rebuild organized around service and intent.	Cleaner approval, cleaner reporting, and safer launch control.
Mixed search intent inside broader groups.	General, Local, City, and State ad groups are separated.	We can see which intent layer actually performs.
Search terms were useful but not systematically mapped.	Converting and relevant terms inform phrase keyword expansion.	The build learns from account history without blindly copying noise.
Ad copy quality varied by ad group.	RSA copy uses headline and description gates before staging.	The client reviews stronger examples before upload.

Campaign Architecture

Layer	Pattern	Purpose	Example
General	Service - Category - General	Core non-geo searches.	Psychiatry - Adult - General
Local	Service - Category - Local	Near-me and close-proximity searches.	Therapy - Trauma - Local
City	Service - Category - City	Named city intent across approved target cities.	Testing - ADHD - City
State	Service - Category - State	State and regional modifiers.	Psychiatry - Children - State

- Representative service families include: Parent Child Services - Children, Psychiatry - Adult, Psychiatry - Children, Testing - ADHD, Testing - Autism, Testing - Child Psychological, Testing - Gifted, Testing - Kindergarten Readiness, Testing - Psychoeducational, Therapy - ADHD, Therapy - Anxiety, Therapy - Autism.
- The first build keeps service coverage together for staging, then future data can justify splitting by service line or geography.

Keyword And Targeting Strategy

Decision	Current Build	Client Review Point
Match type	Phrase match only.	Confirm this conservative launch control.
City coverage	Every city ad group receives all approved city modifiers.	Confirm target cities and any exclusions.
Local intent	Near-me variations are isolated in Local ad groups.	Confirm whether local-intent traffic should receive budget priority.
Locations	18 location or radius rows in the staging CSV.	Confirm core markets and bid adjustments.

Sample Ad Group	Example Keywords
Psychiatry - Adult - General	Psychiatry, Psychiatrist, Psychiatric Care, Psychiatric Services, Psychiatric Nurse Practitioner
Psychiatry - Adult - City	Psychiatry Ashburn VA, Psychiatry Falls Church VA, Psychiatry Leesburg VA, Psychiatry Sterling VA, Psychiatry Dulles VA
Therapy - Trauma - Local	Trauma Therapy Near Me, Trauma Therapist Near Me, Trauma Counseling Near Me
Testing - ADHD - General	ADHD Testing, ADHD Assessment, ADHD Evaluation, ADHD Testing for Children, Children ADHD Testing

How We Split Over Time

Split Trigger	What We Would Do	Reason
Service volume	Move a winning service family into its own campaign.	Separate budget and bidding control.
Geo performance	Split high-performing cities or counties.	Protect efficient markets and reduce wasted spend.
Near-me volume	Build a local-intent campaign.	Give near-me searches their own budget and message testing.
ZIP evidence	Move from city/county targeting into ZIP-level structure.	Only when enough data supports the extra complexity.

Ad Copy Review

- The examples below show actual RSA assets from the staging build.
- The client should review service fit, claims, tone, landing pages, and any phrases that need adjustment.
