GOOGLE ADS CAMPAIGN STRATEGY REVIEW

# Think Happy Live Healthy

Search campaign rebuild, client review, and launch approval package.

**PREPARED BY**
Advertising Report Card

**DATE**
April 28, 2026

**STATUS**
Human Review

**CAMPAIGN**
ARC - Search - Services - V1

## What we inherited

Fragmented campaigns, unclear naming, missing service coverage, mixed search intent, and weak copy controls.

## What we rebuilt

Phrase-match search structure, service taxonomy, geo modifiers, RSA copy review, and client approval gates.

## What needs approval

Copy claims, service scope, landing pages, regional targeting, launch budget, and revision notes.

STARTING POINT

# Inherited Account vs. Rebuilt Structure

## BEFORE: ORIGINAL ACCOUNT STRUCTURE

- x "Ashburn ad" campaign with one generic "Ad group 1" NO STRUCTURE
- x "shannonsabanosh" campaign - provider name, no strategy BRAND LEAK
- x "Leads-Search-4" campaign - unnamed, no intent UNNAMED
- x Service therapy ad groups duplicated in BOTH Ashburn AND Falls Church campaigns SELF-COMPETING
- x Zero coverage for testing services (ADHD, gifted, K-ready, autism, psych evals) MISSING
- x Ad groups named "Anxiety", "Depression" - no audience or intent layer
- x "near me" terms mixed with city and general terms in the same ad group
- x No data-driven geo targeting or bid modifiers based on actual CPA
- x Broad match likely present in older campaigns - uncontrolled spend

## AFTER: REBUILT ACCOUNT STRUCTURE

- ✓ One unified campaign with structured, descriptive ad group names ORGANIZED
- ✓ 9 ad groups staged and validated, 96 planned across full service taxonomy
- ✓ Full testing service coverage: ADHD, Gifted, K-Ready, Autism, Psych Evals
- ✓ Intent-separated naming: Service - Audience - Intent (General / Local / City / State)
- ✓ Phrase-only match type throughout - no broad match CONTROLLED
- ✓ Geo targeting based on real CPA data from account performance reports
- ✓ Tier 1 bid modifiers on Loudoun County ($137 CPA) and Fairfax County ($271 CPA)
- ✓ Expansion roadmap: 5 campaigns planned as data justifies splits
- ✓ All copy passes character limit validation before import

### 01

### Self-Competing Geo Campaigns

Running "Anxiety" in both the Ashburn and Falls Church campaigns meant bidding against yourself for the same searcher. Split budgets, split data, no way to see which copy or keyword actually drove results. Unified into one campaign with geo targeting handles this cleanly.

### 02

### Zero Testing Coverage

The account had no ad groups targeting psychological testing, ADHD evaluations, gifted testing, kindergarten readiness, or autism assessments - services the practice offers. These represent an entirely uncaptured patient segment. The rebuild adds dedicated ad groups for all of them.

### 03

### Intent Mixing

"Therapist near me", "therapist ashburn va", and "therapy" all in the same ad group means you can't match ad copy to search intent. A "near me" searcher is ready to book; a generic "therapy" searcher may just be researching. Separate intent layers let you write to each mindset.

### 04

### Unstrategic Names & Structures

"Leads-Search-4", "Ashburn ad", "Ad group 1" - these names tell you nothing about what they target. When something breaks, you can't diagnose it. When performance is good, you can't replicate it. The new naming convention makes every ad group self-documenting.

REBUILD METHOD

# Campaign Rules We Applied

### Phrase Match Only - No Broad Match

Every keyword in the rebuilt campaign uses phrase match exclusively. Broad match has no controls - Google will show your ad for any related search it decides is relevant, including competitors, out-of-area searches, and low-intent queries. Phrase match means "psychiatrist near me" only triggers when that phrase appears in the search, in that order.

> **The original account was spending on searches like "adhd coach near me" - a service THHL doesn't offer - likely because of broad match. That's wasted budget against the wrong patient intent.**

### Service-First Ad Group Naming

Every ad group follows the pattern: **Service - Audience/Category - Intent Layer**. For example: "Testing - ADHD - Local" or "Therapy - Anxiety - City". This means the ad group name tells you exactly what service it serves, who the audience is, and what kind of keyword intent it captures.

> **When you have 96 ad groups across 5 campaigns, you need to read a name and instantly know what it is. Vague names like "Anxiety" or "Ad group 1" collapse under that scale.**

### Intent Layers: General / Local / City / State

Every service gets four ad groups, one per intent layer. **General** = no geo modifier ("child psychiatry"). **Local** = proximity search ("child psychiatry near me"). **City** = explicit city ("child psychiatry ashburn"). **State** = state-level modifier ("child psychiatry virginia"). Each layer gets copy written for that specific intent.

> **"Near me" searchers are often ready to book now. "Virginia" searchers may be comparing providers across the state. They need different messages. One ad group for all of them wastes that difference.**

### Data-Driven Geo Targeting

Targeting is based on real CPA from the account's location performance report. Loudoun County converted at **$137 CPA** and Fairfax County at **$271 CPA** - both get +20% bid modifiers. Virginia statewide and Washington DC get +10%. Manassas showed zero conversions and gets a -25% reduction.

> **Treating every location the same wastes money on low-converting areas and underinvests in high-converting ones. We let the data decide, not assumptions.**

### RSA Asset Role Architecture

Each headline has an assigned role: keyword match, geo signal, credential, benefit, question, CTA, or proof. Each RSA gets 15 headlines covering all roles, so Google's machine learning can assemble high-relevance combinations for any searcher. Descriptions cover service fit, care process, location access, and CTA - one each, all four slots filled.

> **RSAs perform better when the asset pool gives Google meaningful variety to test. If all 15 headlines say the same thing differently, the system has no real options.**

### Build Now, Split Later

Campaign 1 starts with 9 ad groups in one campaign. As performance data accumulates, the highest-converting services and geographies get promoted into their own campaigns with dedicated budgets. The full taxonomy has 96 planned ad groups across 5 campaigns - all using the same naming and structure conventions.

> **Splitting too early fragments your data and makes optimization harder. Starting unified gives you a baseline, then you split where the data proves it's worth the budget isolation.**

PERFORMANCE EVIDENCE

# Search Term and Geo Signals

**$8.63**
CPA - CHILD ADHD TESTING
4 converting terms, 6 clicks - highest efficiency in the account

**$13.40**
CPA - ANXIETY TREATMENT
4 terms, 13 clicks, 7 conversions - strong, consistent performer

**$13.61**
CPA - CHILD BEHAVIORAL THERAPY
2 terms, 6 clicks - maps to Therapy - Children ad group

**$15.55**
CPA - CHILD PSYCHIATRY/PSYCHOLOGY
3 terms, 11 clicks, 5 conversions - strong child psychiatry signal

**$22.29**
CPA - PSYCHIATRIC NP
3 terms, 12 clicks - psych NP terms are proven converters

**$224**
CPA - ADHD COACH (EXCLUDED)
"adhd coach near me" - high CPA, wrong service type. Excluded from build.

| LOCATION | CONVERSIONS | CPA | BID MODIFIER | RATIONALE |
|---|---|---|---|---|
| **Loudoun County, VA** | 13 | **$137** | **+20%** | Tier 1 - best CPA in account. Ashburn & Leesburg are here. |
| **Fairfax County, VA** | 16 | **$271** | **+20%** | Tier 1 - highest conversion volume. Falls Church is here. |
| Virginia (statewide) | 39 | **$333** | **+10%** | Tier 2 - strong volume base, supports all in-state patients |
| Washington, DC | 5 | **$376** | **+10%** | Tier 2 - lower volume, monitor closely, telehealth expansion |
| Prince William County, VA | 4 | **$301** | **+10%** | Tier 2 - Manassas area, worth including |
| Maryland (statewide) | 15 | **$718** | **Monitor** | High CPA - include but review after 30 days. Do not expand yet. |
| Manassas, VA | 0 | **$0** | **-25%** | Zero conversions, active spend. Reduce bids until data improves. |

CAMPAIGN ARCHITECTURE

# Naming, Intent, and Launch Scope

Every ad group in the account follows this pattern. Read the name and you immediately know what it targets, who for, and what search intent it captures.

**Service** - **Audience / Category** - **Intent Layer**

Examples: **Testing - ADHD - Local** | **Therapy - Anxiety - City** | **Psychiatry - Children - General**

| LAYER | WHAT IT CAPTURES | EXAMPLE KEYWORDS | AD COPY FOCUS |
|---|---|---|---|
| General | No geo modifier in the search query | "child psychiatry", "adhd therapy" | Service name + benefit + credential. Not geo-specific. |
| Local | "near me" and close-proximity language | "psychiatrist near me", "therapy near me" | Geo-specific + proximity signal + CTA. Searcher is ready to book. |
| City | Explicit city in the search query | "therapist ashburn va", "psychiatrist falls church" | City name in headline + service. Show you're specifically in that city. |
| State | State modifier in the search query | "psychiatrist northern virginia", "therapy virginia" | State/region signal + in-person + telehealth. Wider reach. |

**Psychiatry**
12 keywords · 1 RSA · Psych NPs, med mgmt

**Adult Therapy**
14 keywords · 1 RSA · Trauma, grief, anxiety

**Child Psychological Testing**
8 keywords · 1 RSA · Psych assessments for children

**Psychoeducational Evaluations**
8 keywords · 1 RSA · Learning disabilities, IEP

**Gifted Testing**
6 keywords · 1 RSA · G&T program eligibility

**ADHD Testing**
8 keywords · 1 RSA · Testing through age 21

**Kindergarten Readiness Testing**
6 keywords · 1 RSA · Pre-K school readiness

**Autism Testing**
6 keywords · 1 RSA · ASD evaluation child & adult

**Parent Child Services**
6 keywords · 1 RSA · Parent-child support

EXPANSION MAP

# Staged Growth Roadmap

**CAMPAIGN 1 · NOW**

### ARC - Search - Services - V1

9 ad groups covering psychiatry, therapy, and all testing services. Unified campaign gives clean baseline data before splitting.

Staging Now

**CAMPAIGN 2 · NEXT**

### ARC - Search - Child Testing - V1

Splits child psych testing, ADHD testing, gifted testing, K-readiness, and autism testing into a dedicated campaign with its own budget.

After 60 Days Data

**CAMPAIGN 3 · NEXT**

### ARC - Search - Adult Care - V1

Separates adult therapy, trauma, grief, anxiety, and depression from child services once volume justifies the split.

After 60 Days Data

**CAMPAIGN 4 · LATER**

### ARC - Search - Brand - V1

Captures "think happy live healthy", phone number searches, and provider name searches if approved by client. Keeps brand CPA separate from nonbrand.

When Ready

**CAMPAIGN 5 · LATER**

### Geo Splits - Loudoun / Fairfax / DC

After city and ZIP-level location data proves specific areas deserve dedicated budgets and messaging (e.g., Ashburn vs. Falls Church vs. Arlington).

After Geo Data

| CATEGORY | SERVICES COVERED | AD GROUPS (×4 LAYERS) | CAMPAIGN TARGET |
|---|---|---|---|
| Psychiatry | Children's psychiatry, adult psychiatry | Psychiatry - Children / Adult · General/Local/City/State | Campaign 1 → 3 |
| Core Therapies | Anxiety, ADHD, Depression, Autism, Stress, Grief, Trauma, Postpartum, LGBTQIA+, Children | Therapy - [Service] · General/Local/City/State | Campaign 1 → 3 |
| Specialty Modalities | CBT, DBT, Somatic, Mindfulness | Therapy - [Modality] · General/Local/City/State | Campaign 3 |
| Testing Services | Child Psychological, Psychoeducational, Gifted, ADHD, Kindergarten Readiness, Autism | Testing - [Type] · General/Local/City/State | Campaign 1 → 2 |
| Parent-Child Services | Parent-child therapy, family support, behavior therapy for kids | Parent Child Services - Children · General/Local/City/State | Campaign 1 → 3 |

REVISION CONTROLS APPLIED

## Claims and Scope Guardrails

### Applied in this version

- Removed unavailable specialty modality claims from active therapy copy.
- Positioned ADHD testing for children, teens, and young adults through age 21.
- Reframed parent-child services around child-centered support.
- Kept insurance language limited to Anthem/CareFirst BCBS and superbill support.

### Client approval needed

- Confirm every service shown is currently bookable.
- Confirm landing pages match the ad group service and audience.
- Approve geographic targeting before CSV publishing.
- Approve negative keyword exclusions for unsupported searches.
