CAMPAIGN
ARC - Search - Services - V1

What existed

The rebuild report showed the staged search structure, service taxonomy, copy review, and approval topics.

What we built

A validated phrase-match services campaign with 96 ad groups, 96 RSAs, geo layers, and human review controls.

What we are revising

Client-corrected claims, service availability, age eligibility, geo scope, budget focus, and launch-readiness items.

BLOCKING REVISIONS

Facts We Must Correct Before Launch

01

Insurance language

Only Anthem/CareFirst BCBS is in-network. Other carriers are handled through out-of-network superbills.

Pre-launch required Replace broad insurance claims with client-approved language.

02

EMDR capacity

No current clinician openings for EMDR.

Pre-launch required Remove EMDR from active copy, active keywords, and roadmap.

03

ADHD testing age limit

ADHD testing is available through age 21 only.

Pre-launch required Reposition as ADHD Testing for Children, Teens, and Young Adults. Add adult-intent negatives.

04

Parent-child services versus standalone family therapy

Parent-child therapy and family support are available around an identified child patient. Standalone family therapy is not offered.

Pre-launch required Replace family therapy language with parent-child therapy or family support language. Add family therapy negatives.

05

Bidding, geo modifiers, and conversion tracking

Client needs clarity on bid strategy, geo modifiers, conversion tracking, PHI handling, GA4, and Curve Compliance.

Pre-launch required Prepare launch-readiness explanation and verify no PHI is passed to Google measurement systems.

06

Virginia LLC to PLLC conversion

Legal entity name will change in the next month or two and may affect healthcare advertiser verification.

Pre-launch required Coordinate verification timing before launch and avoid unnecessary mid-flight verification changes.

STRATEGIC REVISIONS

Priority, Budget, Brand, and Geo Decisions

Psychiatric NP referral growth target

Psychiatric NP referrals are the highest growth priority. Target is 15 to 20 referrals per week.

> **Revision focus: Consider a psychiatry-focused campaign split and heavier budget weighting instead of simply adding more ad groups.**

Brand campaign on day 1

Client wants to discuss launching brand campaign immediately with modest monthly budget.

> **Revision focus: Approve if budget is capped and brand reporting stays separate from nonbrand.**

Maryland exclusion

Client believes Maryland should likely be excluded due to CPA, logistics, and telehealth limits.

> **Revision focus: Do not use old CPA alone as the proof. Decide based on licensing, telehealth, commute friction, landing page support, and budget test appetite.**

DECISION LOGIC

How these items should affect launch

Change launch weighting

- Psychiatry becomes the primary growth focus because the client needs psychiatric NP referral volume.
- Brand launches separately with a capped budget so brand and nonbrand metrics stay clean.
- Testing and adult therapy remain active, but they should not crowd out psychiatry allocation.

Do not blindly rebuild architecture

- Maryland should be excluded or isolated based on logistics, telehealth constraints, and test appetite.
- Provider-name brand coverage is optional and should be kept low-budget until search volume proves value.
- Strategic changes become CSV changes only after client approval.

REVISION CONTROLS

Claims, Scope, Eligibility, and Verification

These controls are not a repeat of the rebuild audit. They are the factual and compliance changes required because the client corrected availability, payer, eligibility, and launch-readiness details.

ID	REVISION AREA	CONTROL APPLIED	OUTPUT TO UPDATE
R001	Insurance language	Replace broad insurance claims with client-approved language.	rsa_copy_matrix; staging csv; review doc
R002	EMDR capacity	Remove EMDR from active copy, active keywords, and roadmap.	keyword matrix; rsa_copy_matrix; roadmap; staging csv; review doc
R003	ADHD testing age limit	Reposition as ADHD Testing for Children, Teens, and Young Adults. Add adult-intent negatives.	campaign taxonomy; keyword matrix; negatives; rsa_copy_matrix; staging csv
R004	Parent-child services versus standalone family therapy	Replace family therapy language with parent-child therapy or family support language. Add family therapy negatives.	keyword matrix; negatives; rsa_copy_matrix; staging csv
R007	Bidding, geo modifiers, and conversion tracking	Prepare launch-readiness explanation and verify no PHI is passed to Google measurement systems.	launch readiness checklist; tracking audit
R009	Virginia LLC to PLLC conversion	Coordinate verification timing before launch and avoid unnecessary mid-flight verification changes.	launch readiness checklist; account notes

APPROVE | CHANGES

LAUNCH RULE

What can launch versus what can keep improving

Must be fixed before upload

- Insurance wording, EMDR capacity, ADHD age eligibility, family-service scope, tracking explanation, and verification timing.
- Negative keywords for adult ADHD testing and standalone family-therapy intent.

Can be optimized after launch

- Budget weight, provider-name brand coverage, zip-code bid modifiers, and backend lead-to-client matching.
- Website page updates with Moonraker and compliance routing with Curve Compliance.

SOURCES

Files Used For This Revision Report

Report inputs stay in the client build folder and presentation commands stay under presentations/tools.

HTML
SOURCE OF TRUTH

The editable report is fixed-page HTML in the client build folder.

PDF
DELIVERY ARTIFACT

The PDF is exported through the same Chrome headless path as the rebuild report.

2 Gates
QUALITY CHECKS

Static HTML audit and rendered PDF visual audit both run before handoff.
